# WevoPBX For Your **Current** and **Future** Communication System

**WevoPBX** is scalable in terms of hardwares and softwares. The system uses standard server based hardware which can be upgraded to increase capacity. High availability feature is available to minimize down time and increase utilization.

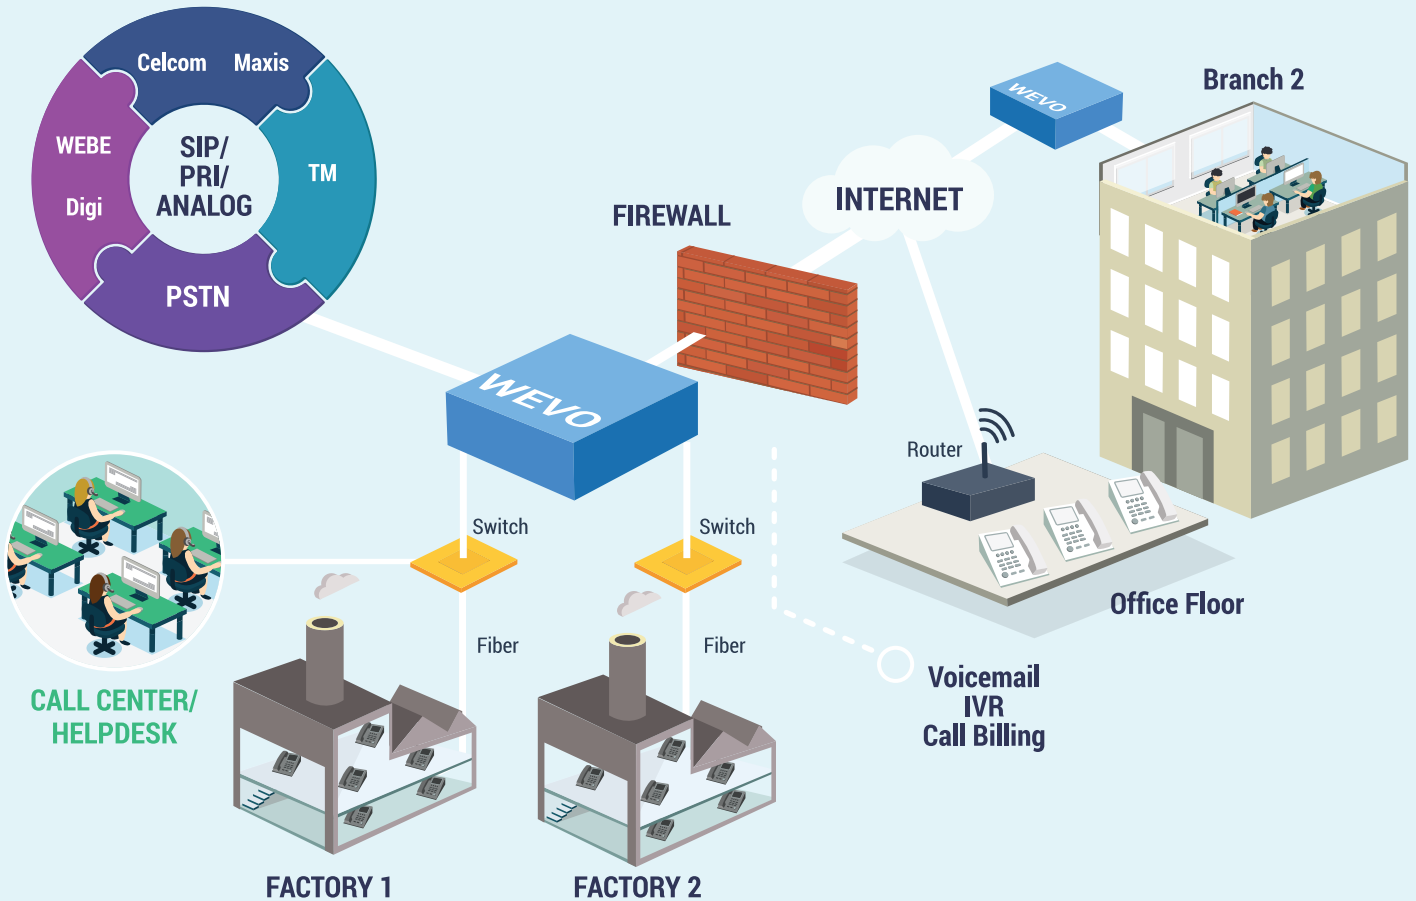

Since it is IP based solution, you can link all your businesses to reduce cost and unify all of them.

## What is WevoPBX

- WEVO Embedded Linux OS.
- IPPBX meet Unified Threat Management (UTM).
- Linux OS is based on well known robust distribution.
- Package as hardcoded firmware with upgradable & installable module features.

# WevoPBX Voice Connectivity

01

**WevoPBX is easy to deploy and manage via WEB interface.** Receptionist or Operator can utilise WEB operator panel for calls monitoring and transfer. A web user portal for user to set their own call forwarding, Web Fax, CDR and etc.

02

**WevoPBX is All in One.** Contain all the telephony features in a box such as IPPBX, CDR, CTI, ACD, Call Recording, Fax to Email, WEB Fax, Firewall, Call Routing and many more...!

03

**WevoPBX is a truly IP based solution.** It is able to integrate with Internet VOIP providers which gives excellent call savings and break free from expensive proprietary solutions which have fewer features...!!

04

**WevoPBX is Highly Configurable.** Since it is using Open-Source softwares, all source codes is available for customizations. As your business expand you do not need to find other solutions to cater for your future expansion.
